Developer at ICF

TACFUG / NCDevCon

About Robot Framework

Robot Framework is a Python-based, extensible keyword-driven automation framework for acceptance testing, acceptance test driven development (ATDD), behavior driven development (BDD) and robotic process automation (RPA)...

blah blah blah blah...

About Robot Framework

(tl;dr)

Robot Framework does stuff for you using easy to write (and read) keyword based tests.

Under The Hood

TESTS (Ride, VSCode, PyCharm)

Robot Framework

Builtin Library

Selenium Library

Db Library

DateTime Library

And more...

Python

Webdriver / Browser

Robot File Weirdness

(this slide intentionally left blank)

Robot File Weirdness Explained

```
*** Variables ***
```

```
${MESSAGE} [space][space] Hello, world!
```

```
| *** Variables *** |
```

```
| ${MESSAGE} | Hello, world!
```

Robot File Example

*** Settings ***

Library SeleniumLibrary

*** Variables ***

\${username} JoeUser

\${password} JoePassword

*** Test Cases ***

Login with invalid credentials should fail

[Template] Invalid logins

invalid \${password} #Invalid Username

\${username} invalid #Invalid Password

*** Keywords ***

Invalid logins

[Arguments] \${username} \${password}

Browser is opened to login page

User "\${username}" logs in with password "\${password}"

Dashboard should not be open

Robot File Overview
